

# Sheet Metal Worker Safety Interventions and Adoption

## Sheet Metal & HVAC Safety Intervention Adoption and Behavior Practice Research

Kristen Hurtado, Kenneth Sullivan. CPWR Small Study, 2023.

### Overview

Sheet metal workers (SMWs) are at high risk for injury and illness due to the nature of their work. The CPWR Small Study, 2023, investigated the adoption and behavior practice of safety interventions among SMWs. The study found that while many workers were aware of safety interventions, adoption rates were low. Key findings include that workers preferred interventions that were easy to use, provided clear instructions, and were supported by management. The study also identified barriers to adoption, such as lack of training and resources. The research highlights the need for targeted interventions and support to improve safety practices among SMWs.

### Key Findings

- Workers preferred interventions that were easy to use, provided clear instructions, and were supported by management.
- The study identified barriers to adoption, such as lack of training and resources.
- The research highlights the need for targeted interventions and support to improve safety practices among SMWs.
- The study found that while many workers were aware of safety interventions, adoption rates were low.
- Key findings include that workers preferred interventions that were easy to use, provided clear instructions, and were supported by management.
- The study also identified barriers to adoption, such as lack of training and resources.
- The research highlights the need for targeted interventions and support to improve safety practices among SMWs.
